

Japan Expresses Admiration of the Iraqi Engineering

The University of Baghdad holds range of advanced modern offers with the cultural and intellectual continuity, and one of the most important exhibitions is the exhibition of contemporary Japanese architecture, from 1996 until 2006, which was held at the college of Engineering, Department of Architecture. The exhibition was held in cooperation with the Iraqi Ministry of Culture and the Japan Foundation, The exhibition occurs after a delegation of the embassy of Japan visited college of Engineering, and briefed on the architecture students' projects in the halls of the Department of Architecture, as well as the delegation briefed on the scientific curriculum for students of architecture , training and cultural programs and the academic activities of the students. College of Engineering has held a ceremony for this occasion under the auspices of Professor Dr. Ali Al-Adeeb, Minister of Higher Education and Scientific Research, attended by Prof. Dr. Musa al-Musawi President of the University of Baghdad and the Japanese Ambassador in Iraq Mr. Susuma Hao Segawa, and Prof. Dr. Qasim Doss and former Minister of Culture Mr. Mufid Al-Jazaa'ri, Mr. Mun'em Al-Faqeer adviser of the Ministry of Culture, Prof. Dr. Saba Abdul Jabbar head of architecture department also attended the occasion , Dr. Amer Al-Haddad Associate Dean for Administrative Affairs, and a number of Head of Departments and instructors in the college and graduate and postgraduate students. Many scientific institutions and universities also were keen to attend the exhibition, where many of the students and professors of Al-Nahrain University and the University of Technology and technical institutes also attended the exhibition as well as the diplomatic staff at the Embassy of Japan.

Mr. President of Baghdad University and Mr. Dean of the college of Engineering welcomed the attendees and the Ambassador of Japan to set up this exhibition, and gave thanks to all those interested in this exhibition, then t the Japanese ambassador delivered a speech in which he showed his admiration of Iraqi architecture and art, stressing his admiration at the University of Baghdad and its educational role. the ambassador also expressed his deep happiness of the cultural cooperation with the University of Baghdad and the college of Engineering, and thanked the College of Engineering to provide the appropriate environment for the exhibition. Representative of the Ministry of Culture also delivered a speech on behalf of the ministry in which he expressed happiness of the Iraqi Ministry of Culture for this cooperation, which is considered the first, and stressed that the ministry will work to develop the cultural cooperation largely, and with a wider opening to the Japanese culture, Professor Dr. Saba Abdul-Jabbar Na'm head of architecture department also gave a speech that welcomed all attendees, confirming the role of the Department of Architecture in the development of the reality of human life through the output of the Advanced Architectural, confirming that the Department is keen to communicate the intellectual and creative continuity, and we are honored to host a cultural event with art and architecture. Art and architecture have deep effect on the life of peoples and nations, and that such an event carries such sublime meanings, embodied in the advanced exhibition of the contemporary Japanese architecture that means a lot for us and the Iraqi architects. All efforts have been praised which have sought diligently to achieve this exhibition, which is a scientific demonstration for the students of architecture.

The President of the University of Baghdad gave the architecture shield to the Ambassador of Japan during the ceremony, and in return the Ambassador gave Mr. Dean of the college of Engineering, a recent book about Japanese architecture, Dean of the college of Engineering also gave Dr. Musa al-Musawi an architecture shield, for his sincere and noble efforts to develop the University and upgrading the higher education.

The exhibition included 100 paintings offered architecture of Japan, and also offered films about the development of Japanese architecture, and this is considered the first exhibition hosted by the Embassy of Japan in the light of cooperation between the college of Engineering and the Japanese Embassy. The college had previously established a total number of meetings between Mr. Dean, College of Engineering , the faculty of the Department of Architecture and the Japanese delegation, during which preparations for the exhibition , a selection of galleries and schedule of the exhibition were done .The university and the College of Engineering has provided all the support for the establishment of this architectural and cultural demonstration in order to provide an professors of architecture to have an idea about the international architectural experiments Prof. Dr. Saba Abdul-Jabbar accompanied the President , Dean of the college of Engineering and the Japanese Ambassador at the opening of the exhibition, expressing her appreciation and admiration of the advanced Japanese architecture, stressing the college continuity of keeping pace with urban revolutions, indicating that the department is working on exhibitions of students' projects, which are of advanced contemporary Modern visions, she also reported that the department is preparing to set up the establishment of a scientific demonstration during the opportunity for the students and celebrations of the anniversary of the university and Ninetieth anniversary of the foundation of the College of Engineering, the website team documented the event and the exhibition with a series of

### The Academic Year Began with good Indicators and clear Optimism

The academic year began early this year at the University of Baghdad, having completed all the procedures and requirements at the University and its faculty members and administrative staff. The academic year for this year is typical and clear, without any political, terror effects as they were in the last years, which had a negative impact on the level of attendance for students and faculty members. The university has initiated through its colleges, institutes and scientific departments to issue instructions early to precede any possibility of an emergency that would delay or disrupt the academic year. The students has attended their classes and follow-up their homeworks, to launch a series of events and activities at the university. There has been a great role of the Department of the students' affairs which initiated issuing instructions and directions to all the colleges that this academic year would be typical. Professor Dr. Musa al-Musawi had met the staff of the student affairs since last Summer vacation and directed that this year should be distinctive and apart from any exceptions or excuses, whether on the part of students or staff at the university, to have a visible commitment and discipline through the dates of attendance of the students and their commitment of the uniforms as well as their performance of their required scientific, laboratory and applied tasks during the year.

Department of Student Affairs at the University of Baghdad has been working for months to launch an optimistic and successful year by all scientific standards of the great universities. The department has finished the preparation of all lists and permissions and the review of official documents and certificates of the new students and graduates, as well as finished the lists of evening studies students and provided for the colleges in order to start the academic year. The website team visited the Department of Students' Affairs and looked at the progress of the work going on with an extremely accurate system. Dr. Hussain Khudhair al-Tai, head of the Student Affairs Department received the team as usual with his beloved smile and typical hospitality .He explained many things and actions taken by the department for the beginning of the academic year. He told us that the University has ended and almost since a month all of the procedures for the nomination of students in the morning studies of the direct admission of the academic year 2011-2012, and completed all the lists of candidates. It also completed the review of the objections of the students and re-nomination, where the number of applicants in the colleges of the University of Baghdad, was more than 10000 students, to compete for the 1925 one thousand nine hundred and twenty-five-seat, at 250 seats for each college of Physical Education ,the college of Education, the college of Media , the college of Fine Arts, the college of Languages. Among testing procedures, the colleges have established theoretical and practical tests for the students, and the interviews of students to ensure their safety. The nomination of the students was to both literary and scientific sections of exclusively high school graduates, taking into consideration the intelligent, talented athletes and teachers within the plan of Ministry of Education, the employees of the Ministry of Defense and the Ministry of the Interior or employees of the armed forces, as well as the top students of some professional high schools.

The website team visited many colleges, institutes and scientific centers at the university, and took lots of photos, as well as met many students and faculty members to see the reality of education in this academic year, where they visited the colleges of engineering, physical education, media and fine arts, science, Computer Center and the other colleges, and perhaps the college of Fine Arts with its seriousness and creativity in the academic year, where the team stopped and met some students and faculty members , we also met Dr. Saad Youssef Al-Basri, Scientific Associate of Dean of the college of Fine Arts , during a lecture given to the evening students at four O'clock in the afternoon, he explained that the students are eager to acquire knowledge and committed to the performance of their scientific duties .

Especially the duties in the application side, that need to be practical effort, and that the students are very keen of commitment and daily attendance. I see that there are good signs of this academic year, which will be a year full of scientific and creative achievements, especially we are keen to provide all that is modern and advanced for the students, especially this year, which we have provided its modern educational technology for students, where we adopted the technology digitalis in the training of students, and as you can see we review the scientific lectures on the screens of "LCD" large size, and then prepare them for students on the websites of the college, for reviewing and copying in order to save time and effort of the student.

In an interview with some students, some of the students explained their happiness and that this year will be distinctive because we are dealing with the best instructors of the giants of art and creativity ,as well as we are proud that we are learning from the best artists who are at a global level. The website team also met some professors of the college of Physical Education, they met Dr. Ali Yusuf, who informed us that the current academic year witnessed a quantum leap in terms of the efforts of instructors and students, the initiatives of students , their perseverance and commitment to attendance in this year, assures that this year will be full of knowledge, perhaps the scientific laboratories, gyms packed with students, with the beginning of the academic year, assures that there is an explicit

#### The Great Engineering Revolution was Launched from the University of Baghdad

Work is continuing day and night in the college of Engineering to meet the demands of Iraqi society, parallel to that is an exceptional effort to reconstruct facilities, buildings and laboratories of the college, which has suffered severe neglect and years of war, siege and occupation; multiple processes rooms to develop and reconstruct everything and world-class consulting offices for planning and implementation of huge projects.

With all these achievements and ambitious projects the humility and tolerance in this prestigious college can be seen, which is established in 1922 and one of the oldest colleges of the Middle East and Arab world, this vision is embodied in a meeting with its Dean Prof. Dr. Qassim Doss, who is modest when he welcomes and greets us in his office which we found a chamber of engineering operations for various projects After that, Dr. Qassim Doss took us in a tour in the corridors of the college to see the approach of the study and its nature with the beginning of the academic year , to discover that there is a unique model to be followed with the other prestigious global colleges, so the commitment of the students and their attendance is rare compared with other colleges, the uniforms and typical halls , filled laboratories, water coolers and air conditioning for the studying halls, to feel again as if we were in a new civilization deserves to call it Mesopotamia of the new Iraqi Engineering.

The fact that the tasks I received in the College Deanship motivated me to achieve what I've drawn a few years ago better and faster while I was in the position of Associate Dean, where I sought, and for years to draw plans that our college will occupy the rankings it deserve with the other sober colleges of the world, because I am quite sure that our creative abilities are no less important than sober science colleges. In cooperation with the former dean, Dr. Rafi' Al-Suhayli who worked also on the development of the college and shares with my support for the implementation of ideas that I've drawn in its reconstruction, and thank God the ideas are crystallized and transferred into reality through a set of measures we have taken to achieve an abundance of reforms , and perhaps the most important of these reforms is what has been achieved in standard time and for the first time in the history of engineering is to repair lab station "stability of power system" and work again after it has been stopped working for twenty-six years. In this year students have used the lab for training and application efficiently, as well as we are proud that we were able to re-repair "synchronization" station during the production of electric power, which has been delayed for decades, and we also repair and operate the laboratories of "microwaves" and "protections" , we also provide students with special equipments for the practical application, we have imported 25 a "GC" and from one of the best World origins to serve the Department of chemical environment, as well as we have provided "fan VG meter " devices and identical devices which are dedicated to measure the fluid in the Department of oil, based on the training of students to the drilling of oil and gas wells.

Not to mention the rehabilitation of all the classrooms, educational equipments, and to develop central air conditioning and lighting to all classrooms in order to let the student enjoys an ideal atmosphere of the study, student, and we moved to the sports and sports stadiums and equipments as well as the development and rehabilitation a special drawing room , with an auditorium for art in order to let the student enjoy a typical atmosphere spurred innovation and creative human thought, and the fact is that what we are pleased with is that the student has moved to a new status that he calls the college to provide laboratory equipments in order to learn and train, The Dean states that from here our determination to put the scientific disciplines and projects for the sake of society, where we have introduced some of the departments and scientific disciplines, and we have integrated some of them to be appropriate with the needs of the society, for example, the situation during the economic blockade has seen a very large setbacks in the reality of education, including the Aeronautical Engineering , after the fall of the regime and as a result of the urgent need of the Iraqi Civil Aviation, we have introduced a branch of Aviation in the Department of Mechanical Engineering, as well as is the case with the Department of energy, where an increase in the need for renewable energy led us to turn the Department of nuclear Energy to the Department of Energy engineering , and we prepared all the laboratory equipments of the Department to graduate generations who meet the requirements of the society, and the case is also with the Department of oil Engineering that has a growing demand after the ministry of oil approached us that it needs oil specializations after the development of oil reality and expansion of the work in the fields of oil and gas, which led us to open broad prospects in the Department of oil Engineering. Our college is following -up the requirements of the market and community service. We have designed and implemented hundreds of engineering projects with major government institutions to serve the community, and we have more huge -projects, our advisory offices implement them for the Ministry of Construction and Housing and for the province of Baghdad and the Ministry of Municipalities, and we have a huge amount of completed projects that are appreciated by the citizens or Iraqi society, The majority of scientific research carried out by researchers in our college but are in several areas, the most important is for the community

#### Professors of the University of Baghdad develop their Researches in Slovenia

After the great development witnessed by the reality of education at the University of Baghdad and the openness of the university to develop its teaching and training staff, the university initiated to allow its teachers to develop the scientific researches with advanced international universities to improve the levels and capabilities of scientific and academic researches, Where a group of professors at University of Baghdad visited University of Ljubljana in Slovenia, for the coordination in the conduct of their scientific researches and conduct scientific coordination in support of their research in the field of measurement and testing, professors have seen the research centers at the University of Ljubljana and the modern sports equipment, stadiums, Olympic halls and swimming pools, sports and special physical laboratories of the college of Sport Education.

Professor Dr. Dijman Pinter has received delegation of professors of the University of Baghdad, with some professors from Iraqi universities, which included Dr. Na'ima Khalaf Zidane from the College of Education for Girls and Dr. Mohammed Jassim Al-Tamimi of the university sport in the college of Fine Arts, and Assistant Professor Dr Abdulbasit Salman media advisor for the Organization of the Scout from college of Mass Media, and Assistant Professor Dr. Hazim Mousa al-Amiri from the University of Al- Qadisiyah, and Dr. Jalal Kamal of the University of Dohuk, and Master's degree student Muhammad Adel from the University of Al- Anbar, and Professor "Damjan Pintar" coordinator of the developmental and training program of \ Slovenian welcomed the Iraqi delegation, and provided the delegation with an integrated nature of the sport movement in the university and the activities undertaken by the centers occupied by the University championships or athletic levels of Slovenia in Europe, as well as he toured with the delegation all the developed scientific laboratories in Europe and briefed them on the most important results of developed scientific researches and the levels and sport aged groups, he also reviewed the latest technological developments in the field of measurement , analysis, movement, and the test.

Professor Dijman has expressed his happiness in the consolidation of scientific and research relations between professors of university of Ljubljana and Iraqi universities, the Iraqi delegation at his residence in Slovenia also received the ex-Dean of the college of Education and Social Studies with the manager of the Institute of Economic Studies at the University, to develop the reality of the cultural relations and to open up between Iraq and Slovenia the areas of undergraduate and postgraduate studies in terms of sport and social specializations, and convey the true image of the reality of education in Slovenia.

### Developed Academic relationships with the University of Faronish

In the framework of scientific and inter-cultural cooperation an academic delegation representing the large Russian University of Faronish visited Baghdad University with the representative of Russian Itar-Tass news agency to develop cultural and scientific relations, and the University of Baghdad hosted the Russian delegation, during holding its Council under the chairmanship of Prof. Dr. Musa Jawad al-Musawi the university president, who received and welcomed the guest delegation, as he began to review the history of the university which is reflected in the setting out of the University of Baghdad, its colleges and scientific institutes. Then Prof. Musa al-Musawi submitted an explanation of the nature and the reality of the scientific colleges in accordance with the scientific university compounds, reviewing buildings and facilities through the windows of the university in Al- Jadirriyya Tower. After that the Russian delegation provided an overview about the reality of education at the University of Faronish and reviewed the scientific status that the University had at the level of Russia and Europe and the progress it made in its scientific career.

To enhance the relationship between the university of Faronish and the University of Baghdad, the Russian delegation conferred Dr. Musa al-Musawi's the highest Russian cultural medal which represents a symbol of cooperation between the two countries, it is the medal of the Union of writers , which is not conferred only for VIPs who contribute to the promotion of cultural and scientific cooperation of the State of Russia with the countries of the world, on the other hand , Dr. Musa al-Moussawi gave a range of symbolic gifts for the visiting delegation. As an evaluation of the visit of the Russian delegation, in order to enhance the role of relationships with developed international universities, as well as the Russian delegation presented a poetic book of the great Russian writer Cholakov, as a gift to the University in recognition and valuation of the initiatives of cultural exchange. The Russian delegation also thanked Chairman and members of the University of Baghdad, praising the great achievements which the University of Baghdad seeks to achieve, and the scientific and technological and information progress of the university and its educational institutions.

Dr. To'ma Muttair Hussain, the Cultural Counselor at the Embassy of Iraq in Russia attended the ceremony of receiving the Russian delegation, , who showed the extent of development and progress witnessed by the Russian universities and the extent of cooperation which a university seeks in consolidating the progress and development bonds with developed universities, and he expressed his deep delight in developing this cultural Relations. The cultural Counselor has initiated to provide a range of scientific fellowships in different specializations for students of the University of Baghdad for the purpose of completing the study in Russia; as well as Dr. To'ma Muttair Hussain presented calls for members of the Council of the University of Baghdad to visit Russia and to participate in a special conference about the environment.

After the Council of the University of Baghdad met the Russian delegation, Dr. Musa al-Musawi ordered to make a field trip to the Russian delegation in the colleges and institutes and scientific centers of university, where the delegation visited the College of Education for girls, and Dr. Ameer Muhammad Ali Dean of the college received the guest delegation and toured the Russian delegation in the scientific Departments, then the delegation visited the applied kindergarten and nursery in the college, and the guest delegation inaugurated the exhibition of the Iraqi Memory documenting the history of the establishment of the college and its activities since inception till now.

After that, the Russian delegation erected statue of the great Russian writer Alexander Sergeyfj Pushkin largest Russia's poet and splendid artist, in the college of Languages as athankful gift to the University of Baghdad. Dr. Riyadh Aziz Hadi Scientific Assistant of the President of the University and Dean of the college of Languages with a group of college students and the faculty members of the college attended the occasion. The University of Baghdad has taken the initiative to erect a statue of the Arab traveler Ahmed ibn Fadlan the Islamic scholar at the Russian University of Faronish who visited, Russia with a letter to Alsqalaba king, and who arrived Bulgarians on May 12 922, corresponding to 12 Muharram 310 AH.

To express the initiative of the University of Baghdad, the University Faronish initiated to erect the monument statue of Pushkin which represents a symbol of literature and poetry in Russia, who was influenced by the Glorious Quran and the biography of Prophet Muhammad may Allah bless him and his family, and reflected in most of his writings. He begins his poem "The Prophet " with two parts that cast light on the circumstances of the prophet before receiving revelation directly, the expected Prophet is characterized with a rich spirit " exhausted " with meditation in the universe and search for the truth of existence, and then his contemplative spirit tends to isolation in the desert.
